Mania Jeans in Israel implements Logistics Vision Suite by Mantis for its extensive e-commerce capabilities

Mania Jeans is a leading men's wear fashion brand in Israel, established in 2002. They offer a complete collection of fashionwear such as jeans, t-shirts, pants, suits, shoes, and various accessories that complete our signature style. The collection of Mania Jeans is inspired by top global trends and is updated weekly.

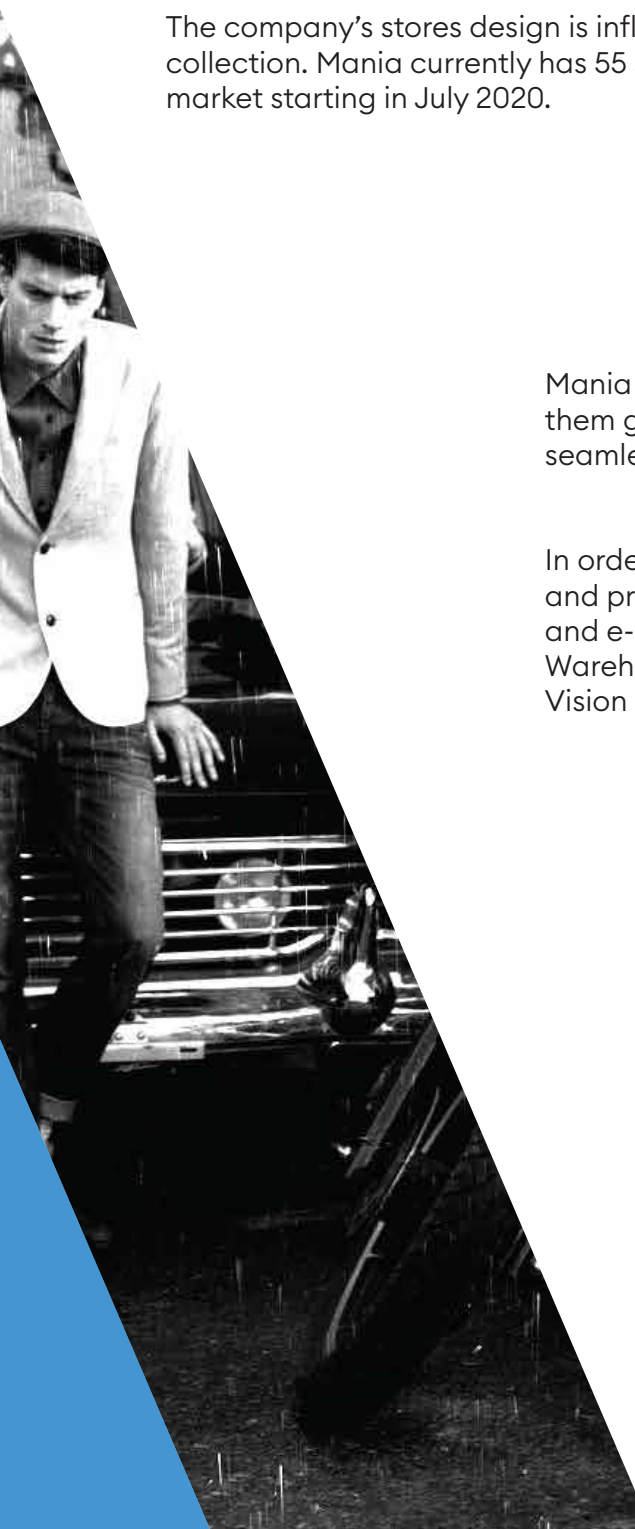

The company's stores design is influenced by Mania's trendsetting apparel and striking collection. Mania currently has 55 stores throughout Israel, as well as pending stores in the US market starting in July 2020.

Mania needed a Warehouse Management System that would help them growth according to their plans and that would be integrated seamlessly with their e-commerce.

In order to improve the quality of its services, to increase its efficiency and productivity and to optimize its warehouse and goods' storage, and e-commerce visibility Mania has decided to implement a Warehouse Management System (WMS) and have selected Logistics Vision Suite (LVS) by Mantis.

Implementing LVS by Mantis allows Mania to have absolute control over the complex logistical processes.

LVS provides Mania an effective and efficient solution for their e-commerce by shortening delivery time for last mile distribution and maximizing customer experience.
