 **NETLOG**
LOJİSTİK

Netlog Logistics is Turkey's largest logistics services provider and is one of the fastest-growing companies within the EMEA region.

More than 9,500 local and global brands in fashion, food, pharma, hi-tech and general services industries rely on the company's innovative supply chain solutions to accelerate their sales.

Netlog Logistics is a strong player in 3 continents, while operating 104 warehouses in 1,200,000 m²'s total indoor storage space, which are located strategically in Turkey (63), Benelux (33), UK (3), USA (1), Middle East (2), Far East (2), and over 4,000 owned fleet.

Netlog Logistics owns and operates 14 market-leading logistics service brands under its portfolio, each focusing on a specific solution and/or sector, with over 14,000 passionate logisticians in addition to its customized solutions throughout the supply chain cycle for all the major B2B industries.

The company also work continuously to innovate logistics solutions for everyday challenges in the e-commerce ecosystem, through its modern e-fulfillment centers and technology driven approach.

Fostering digital transformation, the company recently decided to work together with Mantis to implement Logistics Vision Suite (LVS), as the next step to bring innovation to the logistics processes that will be beneficial to its clients/depositors and will attract new ones.

The strategic partnership of the company with Mantis, the leading international WMS technology vendor, includes the deployment of LVS in 4 of the Turkish e-fulfillment sites of the company as a start to the possibility of further expansion into Netlog's subsidiaries around the globe.

Thanks to its "triangle of advantages" (Adaptability, Flexibility, Scalability), Mantis LVS was selected by Netlog as the ideal Warehouse Management System (WMS) to meet in the best way the ever-changing needs of all clients / depositors that are in different demanding sectors and on the other hand provide supreme customer service level. LVS is implemented with ease and can support the diversified requirements of the clients / depositors of a 3PL in a single instance and on the other hand it can offer advanced traceability throughout all the flows of the journey of goods in the logistics center.

The project is implemented by the very experienced Mantis Turkey team.

NETLOG LOJİSTİK

“Mantis has fulfilled all their commitments to us concerning the implementation support as well as the time-lines. We were extremely satisfied with their concentration into our project and professional approach during the discussions with our teams. Now, we are looking forward to experiencing the performance of the system on-line.”

Ugur Ersop, General Manager
Warehousing and E-Fulfillment Centers, Netlog Logistics

“Tracking all processes from inbound to delivery at the end-user is a pivotal necessity for modern e-commerce operations, a strong pillar of the development of Netlog Logistics. The advanced traceability of LVS enables us to monitor all processes end-to-end.”

Mehmet Senol
Operations Manager, Mantis Turkey
